**MORBIDITY REPORT**

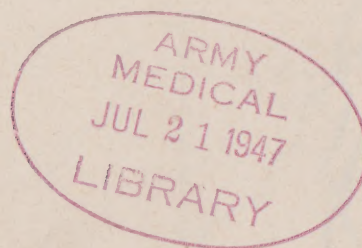

SHORE STATIONS IN CONTINENTAL UNITED STATES

NAVMED 104

WEEK ENDING 8 June 1946

REPORT NO. 232

**RESTRICTED**—THE INFORMATION IN THIS REPORT IS NOT TO BE COMMUNICATED DIRECTLY OR INDIRECTLY TO THE PRESS OR TO ANYONE NOT IN THE ARMED FORCES

## ADMISSION RATES--ALL CAUSES AND RESPIRATORY DISEASES

CONTINENTAL LIMITS OF THE UNITED STATES - 1944, 1945, 1946

CURRENT TRENDS  
Week Ending 8 June 1946

Following last week's pronounced drop in admission rate for All Causes, there is this week an 8% rise from 562 to 610. This rise is not sufficient to change the generally downward trend that has been in evidence in recent weeks. The current rate is essentially the same as the rate, 613, which prevailed a year ago. An increase over last week is noted in ten of the districts. The 5th District is highest, with a rate of 853, which is 28% above the previous week. The 9th District, which has led in overall admission rate for several weeks, reports a decrease of 8% to 766, falling into second place. The lowest rate is again found in the Potomac and Severn River Commands, where a further 14% reduction brings the current rate to 281.

The rate for Total Respiratory Diseases shows an increase of 6%, over last week, rising from 98.3 to 104.6. This roughly parallels the rise in rate for All Causes, cancelling part of the marked drop of the previous week without changing the generally downward trend. A year ago the rate was 168. The 9th District continues to show the highest rate, with 206.0, but this represents a drop of 11% from the previous week and continues the improvement that has recently been noted in this district. The greatest increase in rate was reported by the 5th District, where the current figure of 140.9 is 54% above the previous week. The Potomac and Severn River Commands are lowest, with a rate of 34.2.

CATARRAL FEVER, ACUTE AND INFLUENZA. The rate for these diseases has fallen to 47.9, which compares with 50.7 last week and 105.0 during the corresponding week of 1945. All except the 4th and 13th Districts show improvement or insignificant increase. The largest increase occurred in the 4th District with a rise from 36.2 to 64.6. The greatest improvement is noted in the 9th District, which while still experiencing the highest rate, 69.5, is 16% lower than the previous week. The lowest rate is found in the Potomac and Severn River Commands, where the current rate is 22.0.

PNEUMONIA, BRONCHO AND LOBAR. The low rate for these diseases shows a further decrease this week, dropping from 1.4 to 1.2. A year ago the rate was 3.0. This week's incidence is distributed among seven of the districts. The highest rate reported is 2.7 in the 11th District, which is compared with 4.8 in that district last week.

PNEUMONIA, ATYPICAL. The rate for this disease is 2.7, very near last week's 2.6, and still below the 3.0 rate experienced during the corresponding week of 1945. Only five districts report any incidence. The 11th District is highest with a rate of 10.4, which is 50% above the previous week's rate. The rise in rate for atypical pneumonia more than balances the fall in rate for broncho and lobar pneumonia in the 11th District.

TONSILLITIS AND PHARYNGITIS. An increase is noted in the rate for these diseases, the current figure of 52.8 representing a 21% increase over last week's 43.5. A year ago the rate was 58.0. The highest rate is still found in the 9th District, but this week's report shows a decline there from 144.7 to 134.1. The greatest increase in rate is noted in the 5th District, where the current figure of 75.9 compares with 19.5 a week ago. The lowest rate, 11.0, is reported by the Potomac and Severn River Commands.

SCARLET FEVER. A marked improvement is noted this week with a 45% drop from 6.9 to 3.8. This week's rate establishes a new low for the year. During the corresponding period of 1945, the rate was 8.0. The 9th District shows the highest rate, 11.9, which is 46% lower than the previous week's rate there.

MEASLES. The rate for this disease continues at a higher level than last year. The current rate of 6.9 is compared with 6.8 last week and only 3.0 a year ago. The highest rate is 18.8 in the 9th District where it represents an increase of 63% over the previous week. The 11th District shows a decline of 26% to a rate of 18.1. Four districts reported no incidence.
